

ABSTRACT OF THE DISCLOSURE

5 A body scrubbing apparatus for facilitating cleaning of areas
of a body not readily accessible when the user is bathing. The body
scrubbing apparatus includes a handle member being designed for
being gripped by a hand of the user. A head member is coupled to
the handle member whereby the head member is designed for being
10 positioned opposite the hand of the user when the handle member is
being gripped by the user. A scrubbing member is selectively
mounted to the head member. The scrubbing member is designed
for scrubbing against the user for facilitating cleaning of the user
when the scrubbing member is mounted to the head member. The
15 scrubbing member is selectively replaced when the scrubbing
member is removed from the head member.
